

## Points

-  The order of the routes in the configuration matters and this is by design. The router uses a first-match wins strategy when matching routes, so more specific routes should be placed above less specific routes. In the configuration above, routes with a static path are listed first, followed by an empty path route, that matches the default route. The wildcard route comes last because it matches *every URL* and should be selected *only* if no other routes are matched first.
-  Tracing logs - `enableTracing: true`
-  `Resolve guard`
-  `ModuleWithProviders`
-  `forRoot method`

## Next steps

- ☐ More exp using params, passing data and others
- ☐ Upload initial version of the project to GitHub
- ☐ Create a ReadMe
